Complex Integration

A complex line integral is given by

$$\int_C f(z) dz \quad ,$$

where C is the curve along which the integration is carried out.

Complex Integration

CVT

Sajid Ali

A complex line integral is given by

$$\int_C f(z) dz \quad ,$$

where C is the curve along which the integration is carried out. In order to evaluate it we need to characterize domains.

Simply Connected Domains: A domain D is called simply connected if every closed path in it can be continuously deformed (or shrunk) to only points of D .

Simply Connected Domains: A domain D is called simply connected if every closed path in it can be continuously deformed (or shrunk) to only points of D .

For example, complex plane, interior of a an open disk, etc.

Counter example, a unit circle without origin, an annulus region etc..
